

AccuFlow®

Heating Manifold System

The AccuFlow Heating Manifold System is built with the proven expertise of Zurn PEX in the field of radiant heating. The manifold is available completely preassembled for ease of installation. If customization is preferred the AccuFlow Manifold components are also offered separately. Customization allows the manifold to be built to fit any application or configuration required and is ideal for giving additional options for job needs. It is designed for high-flow capacity applications and is available with port configurations to support up to 12 separate heating loops. The AccuFlow is designed to accept optional actuators should the owner prefer this method for separate loop control. Residential and light commercial applications will optimize all the benefits of radiant heating without burdening the contractor with multiple connections.

Member of PPFA
(Plastic Pipe and
Fittings Association) and
PPI (Plastics Pipe Institute)

AccuFlow® Manifold

- Individual circuit flow meters
- Integral balancing valves
- Accepts optional actuators
- Accepts 3/8", 1/2", 5/8", and 3/4" PEX tubing

Actuators

- 24 volt
- 4 wire
- Complete with end switch
- On/off indicator
