

WARMBOARD TUBING

Product Description

Warmboard tubing is a composite pipe manufactured from PEX Aluminum PEX. PEX (cross-linked polyethylene) tubing is a proven product known for its durability, strength and longevity. The aluminum layer creates a 100% oxygen diffusion barrier, preventing any dissolved oxygen molecules from entering the closed loop system. When these materials are co-extruded together they create an ideal tubing for a Warmboard radiant system.

Details

PEX Aluminum PEX

100% oxygen diffusion

Silane method of cross-linking (PEX B)

1/2" I.D., 5/8" O.D.

Available in 300, 500, 1000 foot rolls

Contains .92 gallons per 100 linear feet

Approved for 125 PSI at 180°F

CSA 137.1, ASTM 1281

Use with Warmboard fittings and manifolds only
